

Fire & Ice

NX FIRE & ICE BOTTLE PRESSURE CONTROLLER
PN: SPEED00020

Tired of trying to keep your bottle pressure in the "Sweet Spot". NX has the ultimate answer, the Fire & Ice Pressure Controller! This microprocessor-controlled unit will keep the bottle pressure correct even in the most demanding conditions. Space age circuitry enables the solid-state heating and cooling unit to maintain nitrous pressures within a 5-PSI window. If ambient temperatures cause the pressure in the nitrous bottle to escalate the unit will engage the bottle cooling mode to bring the pressure down to a preset level, if the ambient temperatures result in a low bottle pressure the unit will engage the heating mode to heat the bottle to the same preset level. "Set it and Forget it" is the word when the "Next Generation Nitrous Technology" of Nitrous Express is on the job! Available now, ask a friendly NX representative how to get yours today!

*PN SPEED00020

NX "Lightning 45" Bottle Valve

The "Lightning 45" is the first nitrous specific valve ever produced in light weight aluminum. Manufactured from 6061T6 billet aluminum and pressure tested to over 10,000PSI to assure your safety. The Lightning '45 will outflow any valve on the market today* by a factor of four. Restrictive bottle valves will no longer be a problem in the nitrous world; this valve will retrofit to any brand nitrous system.

*This excludes the NX DF 500 nitrous bottle valve
**Gauge not included

PART #	DESCRIPTION
11699L	Standard Lightning 45 Bottle Valve for 10lb Bottle w/ Gauge
11699L-15	Standard Lightning 45 Bottle Valve for 15lb Bottle w/ Gauge
11700L	Standard Lightning 45 Bottle Valve for 10lb Bottle
11700L-15	Standard Lightning 45 Bottle Valve for 10lb Bottle
