

Carb Plates Hitman

Select the desired horsepower level and fuel type to determine the nitrous and fuel jet requirements i.e. if you have a carburated Hitman plate system, which is designed to work with 5psi flowing fuel pressure, with gasoline and want a 150 HP boost you would use a 57 Nitrous and a 43Fuel jet.

Spark plugs should be at least 2 steps colder than stock gapped no larger than .035. Do not use platinum tip, extended tip or any plug with multiple ground straps or split ground straps. When in doubt about heat range always go one step colder.

Ignition timing should be retarded 2 degrees per 50 hp of nitrous being sprayed.

Carburated Hitman - 5psi Fuel Pressure			
HP	N20	Gasoline	E85
50	35	29	33
100	46	36	40
150	57	43	48
200	136	48	57

rev 081910

Note: This jet chart is based on using a NX Part# 15100L nitrous solenoid. If you use a higher flowing nitrous solenoid , the jetting must change

This jetting chart is for informational purposes only, NX is not responsible for misuse or misapplication.
